Tag version

For a project if you specify a tag after committing then it git it will create a tag ex: v1.0 and store via tags were it will entire code and can taken in a format of zip

git commit -m "new file feature"

git tag v1.0

git push origin v1.0

Once we are git repo navigate to tags and check the v1.0 can download and use the code

And also navigate to release tab and publish to the users to download

To check how many tags are present

git tag

To delete specific tag only removes tag from local if already pushed to repo it will present there

git tag -d v2.0
